INTELLIGENT TRANSPORTATION

--LCD BAR DISPLAY

Shenzhen Zhonghigu Electronics Technology Co.,Ltd

Introduction

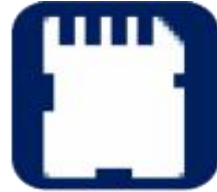

LCD bar display works with bus stop announcer, names of the first station and final station will be changed automatically based on the direction of the bus route, in this case, passenger will know which direction the bus is going. Besides, names of each station and names of transfer station will be displayed on the LCD display as well.

With this device on bus, bus company can send information, such as advertisements, to all buses easily, LCD bar display indicates the improvement of intelligent bus transportation.
